

Protect. Connect. Perform

MyCloud SecureLink

A BETTER WAY TO PROTECT & CONNECT YOUR BUSINESS

Whether you run one location or many, your business depends on the internet for everything, payments, communications, cloud applications and customer service. A single outage or security breach can cost your customers, revenue and reputation. MyCloud SecureLink delivers Enterprise-grade SD-WAN and Network Security in a single appliance monitored and managed remotely by our team of experts.

✓ Same-IP Failover

When a circuit fails, traffic switches to your backup connection instantly, without changing your IP address. VoIP calls, VPNs and cloud sessions stay active with no interruption.

✓ Enterprise Firewall Included

A full next-generation firewall (NGFW) is built into every SecureLink appliance, with deep packet inspection, threat prevention and network segmentation with zero extra cost or setup.

✓ Fully Managed, Zero IT Required

Our team monitors and manages everything remotely from our NOCs (Network Operation Centers). Your only job is connecting the appliance at your location. No certifications, no IT staff, no complexity.

✓ Any Circuit. Any Carrier.

SecureLink bonds fiber, broadband, fixed wireless, LTE and 5G, from any provider. Add MyCloud Always-On Internet Backup for single-circuit customers who need a second path.

✓ VoIP & UCaaS Prioritization

Dynamic QoS automatically prioritizes voice and video traffic over all other internet activity, ensuring crystal-clear calls even during peak network usage.

✓ Compliance-Ready Security

Built-in NGFW segmentation and policy logging supports PCI DSS, HIPAA and GDPR compliance requirements, with audit-ready documentation included.

THE PROBLEMS WE SOLVE

- ✗ Single internet circuit = single point of failure
- ✗ Modernize obsolete hardware
- ✗ Dropped VoIP calls during network congestion
- ✗ Multiple vendors, multiple bills, no accountability
- ✗ Expensive IT staff to manage network infrastructure
- ✗ Failed PCI/HIPAA compliance audits

Enterprise protection. Small business simplicity.

Managed SD-WAN + NGFW + Hardware Included in one monthly fee

INDUSTRIES WE SERVE

- ✓ **Healthcare & Dental**
Keep EHR systems, patient records, and telehealth sessions online 24/7. HIPAA-compliant segmentation included.
- ✓ **Professional Services**
Protect client confidentiality, keep video calls running and meet bar, financial or professional compliance requirements.
- ✓ **Hospitality**
Isolate guest Wi-Fi from business systems, keep POS running at full occupancy and protect your guest reputation.
- ✓ **Manufacturing**
Separate OT and IT networks, protect cloud ERP access and keep operations running through any ISP outage.
- ✓ **Retail & Multi-Location**
POS failover, PCI segmentation and multi-site management, so a carrier outage never stops a transaction.
- ✓ **Financial Services**
Segmentation, logging, and firewall controls that satisfy FFIEC examiners and protect member data across every branch.
- ✓ **Education**
CIPA-compliant filtering, student/staff network separation and always-on connectivity for testing windows.
- ✓ **Rural & Remote**
Bonds fixed wireless, LTE and 5G circuits into enterprise-grade reliability, wherever fiber doesn't reach.

HOW IT WORKS

<1s FAILOVER TIME

Circuit failures are handled in under a second. No dropped calls, no lost sessions.

1 BOX TO DEPLOY

SD-WAN, NGFW and managed hardware in a single pre-configured appliance.

24/7 Managed & Monitored

Remote management means no on-site IT and no surprise maintenance windows.

 MyCloud AI Receptionist

 MyCloud SecureLink

 MyCloud UC

 MyCloud Always-On Internet

 MyCloud Managed Security

MyCloud SecureLink is the network foundation for the complete MyCloud stack. Bundle with **Always-On Internet Backup** for single-circuit customers or pair with **MyCloud Managed Security** to add 24/7 SOC monitoring, endpoint protection and email security on top of a hardened network.
